**D**istrict was the lowest domain in NFHS-5, where some of the important maternal and child health indicators need to be provided with minimum standard error. The overall sample size required for NFHS-5 was derived by taking into consideration the different indicators which are needed at the district level. NFHS-5 had the mandate to produce estimates for each of the 707 districts that the country had as on March 01, 2017.

## SAMPLE SIZE

As a large number of key NFHS-5 indicators at the district level were based on the number of pregnancies (leading to a live birth) during five years prior to the survey, the target sample size for women needed to be large enough to provide an adequate number of pregnancies. The actual sample size in each district and state was determined based on several considerations, including the different levels of disaggregation required for a given district, the types of analyses planned for a given state, the number of indicators to be measured that had very small values (below 5 percent), the need to monitor specific state programmes, and the need to minimize non-sampling errors associated with conducting and monitoring fieldwork for a large sample.

In view of the increasing focus on maternal and child health, especially under the National Health Mission (NHM), and given the objective to track their progress over time at the district and state levels, the sample sizes for NFHS-5 were worked out by considering 3+ ANC visits among women age 15-49 years as the key behavioural indicator, with due care paid to relative precision, statistical power, and design effects. For this purpose, the most recent estimates of NFHS-4 (2015-16) were considered for different states. As per those estimates, among the major states of the country, Bihar had the lowest level of 3+ ANC among women at 27.4 percent. This was, hence, taken as the value of  $p$  and used in the following formula, where value of  $n$  is given by:

$$n = \frac{1}{\alpha^2} \frac{(1 - P)}{P} D$$

where

$n$  is the desired sample size, that is, number of pregnancies,

$P$  is the prevalence of the variable under study,

$\alpha$  represents the desired relative standard error, and  $D$  is the design effect.

However, in response to the suggestions of a subcommittee of the Technical Advisory Committee (TAC) on the sampling design, the original decision to uniformly select 43 PSUs in each of the 707 districts was changed in view of the relative standard error (RSE) of 4+ ANC visits in different districts across the

country. The district-level RSEs for 4+ ANC visits were more than 10 percent in over 60 percent of the districts in seven states, namely Arunachal Pradesh, Bihar, Jharkhand, Madhya Pradesh, Rajasthan, Uttar Pradesh, and Uttarakhand. Therefore, the sample size in each district of these seven states was adjusted by adding two additional PSUs per district. This adjustment was made on the basis of the assumption that there would have been an increase of two percentage points in the prevalence of 4+ANC visits in these districts during the period 2015-18, which in fact was expected to increase more than two percent over this period. Under this assumption, the total number of districts having more than 10 percent RSEs in 4+ ANC visits was expected to decrease from 260 districts to only 17 districts. Accordingly, the sample size in each of the districts in the remaining states/UTs was decreased from 43 PSUs per district to 42 PSUs per district. The details of the number of PSUs and households, along with the number of PSUs and households included in the state module and those included in the subsample for canvassing DBS collection, are presented in Table 1. As NFHS-5 was designed to provide information on husband's background and women's work, knowledge of HIV/AIDS, sexual attitudes and behaviour, and domestic violence only at the state level, and most other indicators at the district level, a subsample of 15% of households (HHs) was selected for the implementation of the state module in addition to the district module. In 15% of households, a long questionnaire was administered, which included all the questions needed for the district-level estimates, plus additional questions on the topics listed above. The decision to select a sample of 15% of HHs for the implementation of the state module was taken based on the sample size required for estimating these parameters at the state level. In addition, the sample size for the implementation of the state module was almost equivalent to the state-level sample size in NFHS-4, providing an opportunity for comparisons of NFHS-3, NFHS-4, and NFHS-5 estimates. To achieve this, it was intended to interview every alternate selected household in 30 percent of the selected PSUs. For example, in West Bengal, 840 PSUs were selected, out of which 20 households were interviewed from each PSU, resulting in a total of 16,800 households (see Table1). Only 15% of those households (or 2,520 households in all) were to have the state module. However, the state module was not administered in every sample PSU. In the PSUs where the state module was administered, out of the 20 households chosen overall, only 10 households (one in every two households) were selected for the state module. This means that in West Bengal, 252 PSUs were selected for the state module. Since there were 840 PSUs in West Bengal, only 30% of the PSUs (252) were randomly selected for the state module.

The state-wise sample sizes for each of the 29 states and seven UTs are presented in Table 1. Dried blood spots (DBS) were collected from a subsample of the selected households. In each of the high malaria endemic states in the country, namely Arunachal Pradesh, Assam, Chhattisgarh, Jharkhand, Manipur, Madhya Pradesh, Meghalaya, Mizoram, Nagaland, Odisha, and Tripura, all the households selected for canvassing of the state module were also selected for the collection of DBS. In the rest of the states, only two PSUs from each district were selected from among the PSUs included in the state module, and every

alternate selected household was selected for the collection of DBS. The total number of PSUs and the total number of households selected for the collection of DBS from different states/UTs, as well as groups of states created for the purpose of survey implementation, are presented in the last two columns of Table 1.

From Table 1, it is evident that by developing district-level indicators at the aggregate level, the overall sample size for NFHS-5 was 609,120 households from 30,456 PSUs, including 91,400 households from 9,140 PSUs for canvassing the state modules.

## **SAMPLE DESIGN**

A uniform sample design was adopted in all the districts. In each district, the sample was selected in two stages: the selection of Primary Sampling Units (PSUs) – which happen to be villages in the rural areas and Census Enumeration Blocks (CEBs) in urban areas – was carried out with probability proportional to size (PPS) in the first stage. This was followed by the random selection of an equal number of households within each PSU in the second stage. Small PSUs with fewer than 40 households (HHs) were linked to the nearest geographically located PSUs. The PSUs were selected by PPS systematic sampling and the households by systematic sampling. The number of households selected per PSU was 20 in every state.

NFHS-5 had a stratified sample design. Stratification was achieved by separating each district into urban and rural areas. A second stage of stratification in the rural areas was achieved based on the village size (number of HHs) by creating three explicit strata and then six equal size sub-strata within each rural stratum after sorting the sampling frame by the percentage of Scheduled Caste (SC)/Scheduled Tribe (ST) population. Within each explicit sampling stratum, implicit stratification was achieved by sorting the sampling frame according to the female literacy rate. Within each of the three explicit rural strata created earlier on, villages were selected with probability proportional to size (PPS) sampling from the 2011 sampling frame.

In urban areas, information related to the CEBs was procured from the Office of the Registrar General and Census Commissioner, New Delhi, India. Within each urban sampling stratum of each district, implicit stratification was achieved by sorting the sampling frame according to the percentage of SC/ST population and by using the PPS selection procedure for selecting the CEBs.

A household listing operation was carried out in all of the selected PSUs before the main survey. The household listing operation consisted of visiting each of the selected PSUs and listing all residential HHs in those PSUs. The resulting list of households served as the sampling frame for the selection of households in the second stage. During the HH listing operation, the selected PSUs with an estimated number of households greater than 300 were divided into segments of about 100-150 HHs. Two segments were

selected for the survey with probability proportional to the segment size. After the HH listing, and in the second stage of sample selection, for each selected PSU, a fixed number of 22 households (adjusted for 10% non-response) were selected with systematic equal selection probability from the household list created during the household listing. All women age 15-49 in the selected households were eligible for the interview, and all men age 15-54 in the households selected for the state module were eligible for the interview.

Sl. No.	States/UTs	Number of districts	Sample size for district module		Sample size for state module		Sample size for DBS

## SAMPLING WEIGHT

Due to the non-proportional allocation of the sample to the different survey domains and to their urban and rural areas, the sampling weights were required for any analysis using the NFHS-5 data to ensure the actual representativeness of the survey results at the national level and as well as at the domain level. Since the NFHS-5 sample was a two-stage stratified cluster sample, sampling weights were calculated based on sampling probabilities separately for each sampling stage and for each cluster. We used the following notations:

$P_{1hi}$ : first-stage sampling probability of the  $i^{th}$  cluster in stratum  $h$

$P_{2hi}$ : second-stage sampling probability within the  $i^{th}$  cluster (household selection)

Let  $a_h$  be the number of clusters selected in stratum  $h$ , let  $M_{hi}$  be the number of households according to the sampling frame in the  $i^{th}$  cluster, and let  $\sum_h M_{hi}$  be the total number of households in stratum  $h$ . The probability of selecting the  $i^{th}$  cluster in stratum  $h$  in the NFHS-4 sample was calculated as follows:

$$\frac{a_h M_{hi}}{\sum_h M_{hi}}$$

Let  $b_{hi}$  be the proportion of households in the selected segments with respect to the total number of households in PSU  $i$  in stratum  $h$  if the PSU is segmented. Otherwise,  $b_{hi} = 1$ , and the probability of selecting cluster  $i$  in the sample is:

$$P_{1hi} = \frac{a_h M_{hi}}{\sum_h M_{hi}} \times b_{hi}$$

Let  $L_{hi}$  be the number of households listed in the household listing operation in cluster  $i$  in stratum  $h$ , and let  $g_{hi}$  be the number of households selected in the cluster. The second stage's selection probability for each household in the cluster was calculated as follows:

$$P_{2hi} = \frac{g_{hi}}{L_{hi}}$$

The overall selection probability for each household in cluster  $i$  of stratum  $h$  was the product of the selection probabilities in the two stages:

$$P_{hi} = P_{1hi} \times P_{2hi}$$

The sampling weight for each household in cluster  $i$  of stratum  $h$  was the inverse of its overall selection probability:

$$W_{hi} = 1 / P_{hi}$$

State-level spreadsheets containing all sampling parameters and selection probabilities were prepared to facilitate the calculation of the design weight. The design weight was adjusted for household as well as individual non-response to obtain the sampling weights for households, women, and men separately. The differences between the household sampling weight and the individual sampling weights were introduced by individual non-response. A special weight for domestic violence (DV) was calculated to account for the random selection of only one woman per household. The final sampling weights were normalized in order to give the total number of weighted cases equal to the total number of unweighted cases at the national level. Normalization was done by multiplying the sampling weight by the estimated total sampling fraction obtained from the survey for the household weight, individual woman's weight, individual man's weight, and the DV weight. In the case of the sampling weights for HIV testing, the weights were normalized at the national level for women and men together so that the HIV prevalence rates calculated for women and men together were valid. Normalized weights are relative weights which are valid for estimating means, proportions, and ratios, but not valid for estimating population totals and pooled data. To un-normalize the weights, the normalized weights should be divided by the relevant estimated total sampling fractions. The survey weights have been listed in the Table 2 below.

**Table 2 Survey weights: NFHS-5**

Module	Name/file	Level	Variable	Remarks
District/State	Household weight (HR file)	National	hv005	The household weight (hv005) for a particular household was the inverse of its household selection probability multiplied by the inverse of the weighted household response rate in the stratum. hv005 was used to estimate household indicators at all levels, including national, regional, state, and district levels.
District/State	Household weight (HR file)	State	shv005	The state-level weight (shv005) was used to estimate state-level household indicators and district-level indicators within the selected states. hv005 could also have been used instead of shv005, with the only difference in the result being that the weighted and un-weighted sample sizes would not have remained the same.
District/State	Individual weight for women (IR file)	National	v005	The individual weight for women (v005) was the household weight (hv005) multiplied by the inverse of the individual weighted response rate for women in the stratum. v005 was used to estimate women's indicators at all levels, including national, regional, state, and district levels.
District/State	Individual weight for women (IR file)	State	sv005	The state-level weight (sv005) was used to estimate state-level individual indicators and district-level indicators within the selected states. v005 could also have been used instead of sv005, with the only difference in the result being that the weighted and un-weighted sample sizes would not have remained the same.
District/State	Individual weight for men (MR file)	National	mv005	The individual weight for men (mv005) was the household weight for the men's subsample multiplied by the inverse of the individual weighted response rate for men in the stratum. mv005 was used to estimate men's indicators at all levels, including national, regional, state, and district levels.
District/State	Individual weight for men (MR file)	State	smv005	The state-level weight (smv005) was used to estimate state-level individual indicators and district-level indicators within the selected states. Mv005 could also have been used instead of smv005, with the only difference in the result being that the weighted and un-weighted sample sizes would not have remained the same.
State	Domestic Violence (IR file)	National	d005	The domestic violence weight (d005) was the individual weight (v005) adjusted for the within-household selection probabilities of women and their non-response for the domestic violence module. d005 was used to estimate women's indicators at national, regional, and state levels.
State	Domestic Violence (IR file)	State	sd005	The state-level weight (sd005) was used to estimate state-level domestic violence indicators. d005 could also have been used instead of sd005, with the only difference in the result being that the weighted and un-weighted sample sizes would not have remained the same.

Note: The district module covered the household questionnaire and the woman's questionnaire from section 1 (Respondent's Background) up to section 7 (Other Health Issues). The state module covered the household questionnaire and the entire woman's questionnaire starting from section 1 ( Respondent's Background) up to section 11 (Household Relations).

## SAMPLING ERROR

The estimates from a sample survey are affected by two types of errors: (1) non-sampling errors, and (2) sampling errors. Non-sampling errors are the result of mistakes made in implementing data collection and data processing such as failure to locate and interview the correct household, misunderstanding of the questions on the part of either the interviewer or the respondent, and data entry errors. Although numerous efforts were made during the implementation of the fifth National Family Health Survey (NFHS-5) to minimize this type of errors, non-sampling errors are impossible to avoid and difficult to evaluate statistically.

Sampling errors, on the other hand, can be evaluated statistically. The sample of respondents selected in NFHS-5 was only one of many samples that could have been selected from the same population, using the same design and the same expected sample size. Each of these samples would have yielded results that differed somewhat from the results of the actual sample selected. Sampling errors are a measure of the variability among all possible samples. Although the degree of variability is not known exactly, it can be estimated from the survey results.

A sampling error is usually measured in terms of the standard error for a particular statistic (mean, percentage, etc.), which is the square root of the variance. The standard error can be used to calculate confidence intervals within which the true value for the population can reasonably be assumed to fall. For example, for any given statistic calculated from a sample survey, the value of that statistic will fall within a range of plus or minus two times the standard error of that statistic in 95 percent of all possible samples of identical size and design.

If the sample of respondents had been selected as a simple random sample, it would have been possible to use straightforward formulas for calculating sampling errors. However, the NFHS-5 sample was the result of a multi-stage stratified design, and, consequently, it was necessary to use more complex formulae. The computer software used to calculate sampling errors for NFHS-5 is programmed in SAS/Stata. This procedure uses the Taylor linearization method for variance estimation for survey estimates that are means or proportions. The Jackknife repeated replication method is used for variance estimation of more complex statistics such as total fertility rates and child mortality rates.

The Taylor linearization method treats any proportion or mean as a ratio estimate,  $r = y/x$ , where  $y$  represents the total sample value for variable  $y$ , and  $x$  represents the total number of cases in the group or subgroup under consideration. The variance of  $r$  is computed using the formula given below, with the standard error being the square root of the variance:

$$SE^2(r) = var(r) = \frac{1-f}{x^2} \sum_{h=1}^H \left[ \frac{m_h}{m_h - 1} \left( \sum_{i=1}^{m_h} z_{hi}^2 - \frac{z_h^2}{m_h} \right) \right]$$

in which

$$z_{hi} = y_{hi} - rx_{hi}, \text{ and } z_h = y_h - rx_h$$

where

$h$  represents the stratum, which varies from 1 to  $H$ ,

$m_h$  is the total number of clusters selected in the  $h^{\text{th}}$  stratum,

$y_{hi}$  is the sum of the weighted values of variable  $y$  in the  $i^{\text{th}}$  cluster in the  $h^{\text{th}}$  stratum,

$x_{hi}$  is the sum of the weighted number of cases in the  $i^{\text{th}}$  cluster in the  $h^{\text{th}}$  stratum, and

$f$  is the overall sampling fraction, which is so small that it is ignored.

The Jackknife repeated replication method derives estimates of complex rates from each of several replications of the parent sample, and calculates standard errors for these estimates using simple formulae. Each replication considers all but one cluster in the calculation of the estimates. Pseudo-independent replications are thus created. In the NFHS-5 sample for India, there were 30,456 clusters. Hence, 30,456 replications were created. The variance of a rate  $r$  is calculated as follows:

$$SE^2(r) = var(r) = \frac{1}{k(k-1)} \sum_{i=1}^k (r_i - r)^2$$

in which

$$r_i = kr - (k-1)r_{(i)}$$

where

$r$  is the estimate computed from the full sample of 30,456 clusters,

$r_{(i)}$  is the estimate computed from the reduced sample of 30,455 clusters ( $i^{\text{th}}$  cluster excluded), and

$k$  is the total number of clusters.

In addition to the standard error, the design effect (DEFT) for each estimate is computed, which is defined as the ratio between the standard error using the given sample design and the standard error that would result if a simple random sample had been used. A DEFT value of 1.0 indicates that the sample design is as efficient as a simple random sample, while a value greater than 1.0 indicates the increase in the sampling error due to the use of a more complex and less statistically efficient design. The relative standard error (SE/R) and confidence limits ( $R \pm 2SE$ ) for each estimate are also computed.

Sampling errors for NFHS-5 were calculated for selected variables considered to be of primary interest. The results have been presented in this appendix for India as a whole and for the urban and rural areas of each state. For each variable, the type of statistic (mean, proportion, rate, or ratio) and the base population are given in Table A.1. Tables A.2-A.4 present the total, urban, and rural values of the statistic (R), their standard errors (SE), the number of unweighted (N) and weighted (WN) cases, the design effect (DEFT), the relative standard error (SE/R), and the 95 percent confidence limits ( $R \pm 2SE$ ) for each variable. The DEFT is considered undefined when the standard error for a simple random sample is zero (when the estimate is close to 0 or 1).

**Table A.1 State and district information**

State/union territory	District
Andaman & Nicobar Islands	Nicobar, North and Middle Andaman, South Andaman
Andhra Pradesh	Anantapur, Chittoor, East Godavari, Guntur, Krishna, Kurnool, Prakasam, Sri Potti Sriramulu Nellore, Srikakulam, Visakhapatnam, Vizianagaram, West Godavari, Y.S.R.
Arunachal Pradesh	Anjaw, Changlang, Dibang Valley, East Kameng, East Siang, Kra Daadi, Kurung Kumey, Lohit, Longding, Lower Dibang Valley, Lower Subansiri, Namsai, Papum Pare, Siang, Tawang, Tirap, Upper Siang, Upper Subansiri, West Kameng, West Siang
Assam	Baksa, Barpeta, Biswanath, Bongaigaon, Cachar, Charaideo, Chirang, Darrang, Dhemaji, Dhubri, Dibrugarh, Dima Hasao, Goalpara, Golaghat, Hailakandi, Hojai, Jorhat, Kamrup, Kamrup Metro, Karbi Anglong, Karimganj, Kokrajhar, Lakhimpur, Majuli, Marigaon, Nagaon, Nalbari, Sivasagar, Sonitpur, South Salmara Mancachar, Tinsukia, Udalguri, West Karbi Anglong
Bihar	Araria, Arwal, Aurangabad, Banka, Begusarai, Bhagalpur, Bhojpur, Buxar, Darbhanga, Gaya, Gopalganj, Jamui, Jehanabad, Kaimur (Bhabua), Katihar, Khagaria, Kishanganj, Lakhisarai, Madhepura, Madhubani, Munger, Muzaffarpur, Nalanda, Nawada, Pashchim Champaran, Patna, Purbi Champaran, Purnia, Rohtas, Saharsa, Samastipur, Saran, Sheikhpura, Sheohar, Sitamarhi, Siwan, Supaul, Vaishali
Chandigarh	Chandigarh
Chhattisgarh	Balod, Baloda Bazar, Balrampur, Bastar, Bemetara, Bijapur, Bilaspur, Dantewada, Dhamtari, Durg, Gariyaband, Janjgir-Champa, Jashpur, Kabirdham, Kanker, Kondagaon, Korba, Korea, Mahasamund, Mungeli, Narayanpur, Raigarh, Raipur, Rajnandgaon, Sukma, Surajpur, Surguja
Dadra & Nagar Haveli and Daman & Diu	Dadra & Nagar Haveli, Daman, Diu
Goa	North Goa, South Goa
Gujarat	Ahmadabad, Amreli, Anand, Arvalli, Banas Kantha, Bharuch, Bhavnagar, Botad, Chhotaudepur, Dang, Devbhumi Dwarka, Dohad, Gandhinagar, Gir Somnath, Jamnagar, Junagadh, Kachchh, Kheda, Mahesana, Mahisagar, Morbi, Narmada, Navsari, Panch Mahals, Patan, Porbandar, Rajkot, Sabar Kantha, Surat, Surendranagar, Tapi, Vadodara, Valsad
Haryana	Ambala, Bhiwani, Charki Dadri, Faridabad, Fatehabad, Gurugram, Hisar, Jhajjar, Jind, Kaithal, Karnal, Kurukshetra, Mahendragarh, Nuh, Palwal, Panchkula, Panipat, Rewari, Rohtak, Sirsa, Sonapat, Yamunanagar
Himachal Pradesh	Bilaspur, Chamba, Hamirpur, Kangra, Kinnaur, Kullu, Lahul and Spiti, Mandi, Shimla, Sirmaur, Solan, Una
Jammu & Kashmir	Anantnag, Badgam, Bandipora, Baramulla, Doda, Ganderbal, Jammu, Kathua, Kishtwar, Kulgam, Kupwara, Poonch, Pulwama, Rajauri, Ramban, Reasi, Samba, Shopian, Srinagar, Udhampur
Jharkhand	Bokaro, Chatra, Deoghar, Dhanbad, Dumka, East Singhbhum, Garhwa, Giridih, Godda, Gumla, Hazaribagh, Jamtara, Khunti, Koderma, Latehar, Lohardaga, Pakur, Palamu, Ramgarh, Ranchi, Sahebganj, Saraikela Kharsawan, Simdega, West Singhbhum
Karnataka	Bagalkot, Ballari, Belagavi, Bengaluru Rural, Bengaluru Urban, Bidar, Chamarajanagar, Chikkaballapur, Chikkamagaluru, Chitradurga, Dakshina Kannada, Davangere, Dharwad, Gadag, Hassan, Haveri, Kalaburagi, Kodagu, Kolar, Koppal, Mandya, Mysuru, Raichur, Ramanagara, Shivamogga, Tumakuru, Udupi, Uttar Kannad, Vijayapura, Yadgir

<sup>1</sup> Using the number of households falling into specific response categories, the household response rate (HRR) was calculated as:  $\frac{\text{Number of households in category}}{\text{Total number of households}} \times 100$

C + HP + P + R + DNF

<sup>2</sup> The eligible women's response rate (EWRR) was equivalent to the percentage of interviews completed (EWC)  $\frac{\text{EWC}}{\text{Total eligible women}} \times 100$

EWC + EWNH + EWP + EWR + EWPC + EWI + EWO

<sup>3</sup> The overall women's response rate (OWRR) was calculated as:  $\frac{\text{EWRR} \times \text{HRR}}{100}$

Number of men	389	1,689	4,810	1,654	139	554	3,553	4,201	111,176			
Eligible men's response rate (EMRR) <sup>2</sup>	94.3	92.2	93.9	89.1	97.1	96.4	94.9	92.0	91.6			
Overall men's response rate (OMRR) <sup>3</sup>	92.0	89.3	91.4	87.1	97.1	94.5	92.6	89.3	89.2			

<sup>1</sup> Using the number of households falling into specific response categories, the household response rate (HRR) was calculated as:  $100 * R$

C + HP + P + R + LNT

<sup>2</sup> The eligible men's response rate (EMRR) was equivalent to the percentage of interviews completed (EMC)  $100 * EMC$

EMC + EMNH + EMP + EMR + EMPC + EMI + EMO

<sup>3</sup> The overall men's response rate (OMRR) was calculated as:  $OMRR = HRR * EMRR/100$

# ESTIMATES OF SAMPLING ERRORS

**Table B.1 List of variables for sampling errors, India, 2019-21**

Variable	Estimate	Base population
<b>HOUSEHOLDS</b>		
Using an improved source of drinking water	Proportion	Households
Using an improved sanitation facility	Proportion	Households
Using iodized salt	Proportion	Households
Sex ratio (females per 1,000 males)	Ratio	<i>De facto</i> household population, all ages
<b>WOMEN</b>		
No schooling (Females age 6 years and above)	Proportion	<i>De facto</i> household population of females age 6 and above
Urban residence	Proportion	Women age 15-49
No schooling (Women age 15-49)	Proportion	Women age 15-49
Completed 10 or more years of schooling	Proportion	Women age 15-49
Never married, including married <i>gauna</i> not performed	Proportion	Women age 15-49
Currently married	Proportion	Women age 15-49
Married before age 18	Proportion	Women age 20-49
Currently using any contraceptive method	Proportion	Currently married women age 15-49
Currently using a modern contraceptive method	Proportion	Currently married women age 15-49
Currently using a traditional contraceptive method	Proportion	Currently married women age 15-49
Currently using pill	Proportion	Currently married women age 15-49
Currently using IUD/PPIUD	Proportion	Currently married women age 15-49
Currently using condom/ <i>Nirodh</i>	Proportion	Currently married women age 15-49
Currently using female sterilization	Proportion	Currently married women age 15-49
Using public health sector source of contraception	Proportion	Women age 15-49 currently using modern methods of contraception
Unmet need for family planning	Proportion	Currently married women age 15-49
Want no more children	Proportion	Currently married women age 15-49
Want to delay next birth for at least 2 years	Proportion	Currently married women age 15-49
Mother received four or more antenatal care (ANC) visits	Proportion	Women with at least one birth in last five years (last birth)
Took iron and folic acid (IFA) for 100 days or more	Proportion	Women with at least one birth in last five years (last birth)
Birth registration	Proportion	<i>De jure</i> children under age 5 years
Births delivered by a skilled provider	Proportion	Births in last 5 years
Institutional delivery	Proportion	Births in last 5 years
Postnatal check for mother within 2 days of birth	Proportion	Women with at least one birth in last five years (last birth)
Postnatal check for newborn within 2 days of birth	Proportion	Women with at least one birth in last five years (last birth)
Exclusive breastfeeding	Proportion	Children under age 6 months
Children with diarrhoea in the last two weeks	Proportion	Children under age 5 years
Treated with oral rehydration salt (ORS) packets	Proportion	Children under age 5 years with diarrhoea in last 2 weeks
Children with diarrhoea taken to a health provider	Proportion	Children under age 5 years with diarrhoea in last 2 weeks
Child received BCG vaccination	Proportion	Children age 12-23 months
Child received penta or DPT vaccination (3 doses)	Proportion	Children age 12-23 months
Child received polio vaccination (3 doses)	Proportion	Children age 12-23 months
Child received first dose of measles vaccine	Proportion	Children age 12-23 months
Child received penta or hepatitis B vaccination (3 doses)	Proportion	Children age 12-23 months
Child with all basic vaccinations	Proportion	Children age 12-23 months
Height-for-age, stunting (below -2SD)	Proportion	Children under age 5 years who were measured
Weight-for-height, wasting (below -2SD)	Proportion	Children under age 5 years who were measured
Weight-for-age, underweight (below -2SD)	Proportion	Children under age 5 years who were measured
Children with any anaemia	Proportion	Children age 6-59 months with an anaemia test
Women with any anaemia	Proportion	Women age 15-49 with an anaemia test
Body mass index (BMI) <18.5 kg/m <sup>2</sup>	Proportion	Women age 15-49 who were measured
Body mass index (BMI) ≥25.0 kg/m <sup>2</sup>	Proportion	Women age 15-49 who were measured
Waist-to-hip ratio ≥0.85	Proportion	Women age 15-49 who were measured
Have heard of HIV or AIDS	Proportion	Women age 15-49
Have comprehensive knowledge about HIV/AIDS	Proportion	Women age 15-49
Ever experienced physical or sexual violence	Proportion	Women age 18-49
Total fertility rate (last 3 years)	Rate	Women
Neonatal mortality	Rate	Births in last 5 years
Postneonatal mortality	Rate	Births in last 5 years
Infant mortality	Rate	Births in last 5 years
Child mortality	Rate	Births in last 5 years
Under-five mortality	Rate	Births in last 5 years
<b>MEN</b>		
No schooling (Males age 6 years and above)	Proportion	<i>De facto</i> household population of males age 6 and above
Urban residence	Proportion	Men age 15-49
No schooling (Men age 15-49)	Proportion	Men age 15-49
Completed 10 or more years of schooling	Proportion	Men age 15-49
Never married, including married <i>gauna</i> not performed	Proportion	Men age 15-49
Currently married	Proportion	Men age 15-49
Married before age 21	Proportion	Men age 25-49
Want no more children	Proportion	Currently married men age 15-49
Want to delay next birth for at least 2 years	Proportion	Currently married men age 15-49
Men with any anaemia	Proportion	Men age 15-49 with an anaemia test
Body mass index (BMI) <18.5 kg/m <sup>2</sup>	Proportion	Men age 15-49 who were measured
Body mass index (BMI) ≥25.0 kg/m <sup>2</sup>	Proportion	Men age 15-49 who were measured
Waist-to-hip ratio ≥0.90	Proportion	Men age 15-49 who were measured
Have heard of HIV or AIDS	Proportion	Men age 15-49
Have comprehensive knowledge about HIV/AIDS	Proportion	Men age 15-49

**Table B.2 Sampling errors: Total sample, India, 2019-21**

Variable	Value (R)	Standard error (SE)	Number of cases		Design effect (DEFT)	Relative standard error (SE/R)	Confidence limits	
			Unweighted (N)	Weighted (WN)			R-2SE	R+2SE
HOUSEHOLDS

**T**he challenges relating to expanding the content and coverage of NFHS, along with those that arose from the COVID-19 pandemic, resulted in the devising of innovative mechanisms in data collection and the adoption of multiple strategies during survey implementation. This section deals with a brief description of those innovations and implementation strategies which contributed to maintaining the overall quality of data.

### **MULTI-LAYER MONITORING AND SUPERVISION OF FIELDWORK**

In conformity with the standards of the Demographic Health Surveys (DHS) conducted across the world, NFHS has provisions for a multi-layer monitoring of fieldwork to strengthen the data quality, including spot checks, backchecks, review of field check tables, debriefing of fieldworkers, and continuous supportive supervision. In the course of NFHS-5, the results obtained each day, using inbuilt CAPI programmes, provided constant feedback and facilitated the adoption of corrective measures on the individual and team basis for various aspects of survey implementation. The IIPS field staff conducted spot checks and backchecks of surveyed households in a minimum of 10 percent of PSUs that were randomly selected by the IIPS Central Office. Once the errors were identified, the nature of the errors was explained to all the team members, along with the possible reasons for those errors. The team members were then required to re-visit those respondents and households before closing the data for those PSUs. The practice of debriefing and revisits in the first week of the survey was a major step in improving the data quality, especially in minimizing the missing events due to a communication gap between interviewers and respondents.

### **DEVELOPING NESTED DESIGNS USING A MODULAR APPROACH**

Given the mandate of NFHS-5 (2019-21) to provide district-level estimates of population, health, and nutrition indicators, a nested design was developed by adopting a modular approach. Some of the key domains like husband's background and women's work, sexual behaviour, knowledge of HIV/AIDS, household relations, and women's empowerment, which were not designed to have estimates at the district level, were included in the state module. Thus, the district module was a shorter version of the questionnaire canvassed in all 640 districts in NFHS-4 (as on March 31, 2014) and in 707 districts in NFHS-5 (as on March 31, 2017). The state module, which was an extended version of the questionnaire, was canvassed in 30 percent of selected PSUs in each district and among 50 percent of selected households (HHs) of these PSUs along with several biomarkers and additional sections in the woman's and man's questionnaires.

### **PARADIGM SHIFTS IN THE DATA COLLECTION PROCESS WITH THE INTRODUCTION OF CAPI**

Starting with the 2015-16 round, NFHS has been using Computer Assisted Personal Interviewing (CAPI), which helps in strengthening the data quality and saves time. The CAPI software provides results in real time, which are easily exportable to other formats. The CAPI data entry and editing programme is designed with numerous checks

and strategies to ensure high data quality. The inbuilt algorithm in the CAPI programme automatically handles skip patterns, filters, and eligibility for questionnaires. The process of data collection using CAPI has an excellent provision of synchronizing data from the interviewer's CAPI computer to the supervisor's CAPI computer, which provides an opportunity for back-checking information to improve data quality. This inbuilt mechanism partially saves incomplete questionnaires, offering the opportunity to complete the interview in multiple sessions, minimizing respondents' fatigue even in surveys with lengthy questionnaires. The use of the innovative SyncCloud technology improves the data synchronization from the supervisor's CAPI to the Central Office and gives access to real-time data from any device or computer. In this process, NFHS-5 assigned a unique code to each investigator within a state, helping track the progress and performance of the investigators and providing timely individual-level feedback.

### **USING FIELDCHECK TABLES (FCTS): AN OPPORTUNITY FOR REAL-TIME ACCESS TO DATA AND IMMEDIATE FEEDBACK**

NFHS-5 developed a protocol for accessing real-time data daily using the SyncCloud data streaming system. Continuous evaluation of data through field-check tables and regular feedback to field teams helped avoid errors and improved the quality of the data. The CAPI programmes helped in generating field-check tables (FCTs) on key indicators daily, which were reviewed by the Quality Assurance Team (QAT) in the Central Office to allow individual-level feedback to be communicated to the teams working in different parts of the country. A total of 51 indicators were developed as part of the FCTs, covering various aspects of data quality, including response rates, age displacement, birth displacement, and skips associated with multiple questions. These FCTs were used to provide feedback on the data quality. In addition, Skype interactions with the core team of the Field Agency (FA) and the IIPS field POs once every two weeks were arranged by the members of the quality assurance unit in the NFHS office at IIPS in NFHS-5 (2019-21). All these innovative measures significantly contributed to the tracking and monitoring of the daily field operations of NFHS. Particularly, they were used to boost the morale of the underperforming teams/interviewers and to motivate them citing the performance of the other teams.

### **DEVELOPING ERROR MESSAGES IN THE DATA COLLECTED FROM A PSU BY THE SUPERVISOR**

For the first time in NFHS-5 (2019-20), there was a provision for generating error messages with regard to internal consistency in the data, with the provision for immediate corrections. IIPS and ICF developed and implemented this application to reduce the burden of secondary editing after the completion of the data collection. This application was designed so that any inconsistencies in the responses of a completed interview could be highlighted. The team supervisor could ask the interviewer about the inconsistencies and make the necessary corrections. The interviewer could revisit the respondent if required for any clarification of those issues. In this way, the error messages turned out to be a handy tool to ensure data quality in NFHS-5 before the survey team left a completed PSU.

## **GENERATING PROJECT OFFICER'S QUERY REPORT (POQR) ON SELECTED INDICATORS FOR EACH PSU**

It is worth mentioning that backchecks are an integral part of the quality control mechanism adopted in all the large-scale surveys. However, two questions are generally raised on the issue of backchecks. First, how should the households to revisit be selected? Second, how should the changes required be incorporated? To address these issues, NFHS-5 (2019-21) developed and used an algorithm called the Project Officer's Query Report (POQR) on the Supervisor's CAPI instrument. Once the data collection was completed in a PSU and data synchronized on the supervisor's CAPI, the IIPS project officer, using a specific login and password, could run the query tool to view a list of households having some potential gaps and inconsistencies in the information. After running POQR, the IIPS PO would revisit the household and backcheck the information, maintaining gender sensitivity. Thus, the application of POQR in NFHS-5 helped review subsamples of interviewed households to ensure accuracy and reliability of the information, and, if there was any problem, to go back to the interviewer's CAPI to correct that information before resynchronizing the data on the supervisor's CAPI. This application was applied throughout the survey with a relatively larger emphasis during the post-pandemic survey implementation.

## **STANDARD OPERATING PROCEDURE (SOP) IN THE SURVEY IMPLEMENTATION - PANDEMIC SITUATION**

Taking the COVID-19 situation into account, with the restart of the survey, several protective measures were taken to prevent the COVID-19 infection among the survey teams and the respondents as well as to ensure the pandemic didn't affect the accomplishments achieved through the hard work of every member of the NFHS team. At the team and surveyor levels, insurance coverage was ensured centrally from IIPS. All core team members and survey teams were mandated to install the Aarogya Setu App on their phones and instructed to maintain physical distance during the interview to ensure privacy and confidentiality of the respondents. In addition, all teams were educated to check for the well-being of each team member every morning before leaving for fieldwork with thermal screening, the equipment for which was provided by IIPS. If any member of a team showed symptoms, the team was stopped for the fieldwork, after which the member was diagnosed. The fieldwork was initiated only if the member was found to be COVID-19 negative with a self-declaration notice from all the team members that they were fit to go to the field on a daily basis.

At the community level, all the teams were mandated to contact the headman / frontline workers of the village to get the COVID-19 status of the selected household members before the interviews were done. Thermal screening of community members who were willing to be screened by the Health Investigators of the survey team on the first day of the visit was carried out while distributing specially-designed leaflets to the community as part of COVID-19 awareness creation. This created a conducive environment for the survey teams at the PSU level. Another intervention was providing masks, sanitizers, and COVID-19 brochures to all the selected households, with each respondent being given a new mask during the interview and CAB investigations. Compulsory thermal screening of all the members of selected households was conducted. If anyone in the household had fever, the household was not allowed to be interviewed. A revisit was done for the reassessment of status over the next three or four days.

For the CAB investigations, the health investigators were instructed to use additional protective equipment like face shields, aprons, and goggles. Updated guidelines from the government were adopted from time to time. The team members were directed to use sanitizer/soap and water to clean their hands frequently during the fieldwork, preferably at the beginning and end of the CAB investigations of each respondent. The CAB investigations were asked to be done with minimum contact with the respondents. The protocol of using a new set of gloves for each respondent and disposing bio-hazardous waste daily was strictly adhered to. Furthermore, the CAB equipment was mandated to be cleaned after the end of the CAB measurements in each household.

Table D.1 Household age distribution

Single-year age distribution of the *de facto* household population by sex (weighted), India, 2019-21

Age	Women		Men		Age	Women		Men	
	Number	Percent	Number	Percent		Number	Percent	Number	Percent
0	21,791	1.6	22,835	1.7	37	15,505	1.1	13,674	1.0

**Dr. Fred Arnold**, Technical Deputy Director, Demographic and Health Surveys Program, ICF, Maryland 20850, USA

**Dr. Mahmoud Elkasabi**, Senior Survey Sampling Statistician, Demographic and Health Surveys Program, ICF, Maryland 20850, USA

The four core survey questionnaires (Household Questionnaire, Woman’s Questionnaire, Man’s Questionnaire, and Biomarker Questionnaire) used in NFHS-5 are presented here: [http://rchiips.org/nfhs/NFHS-5\\_State\\_Report.shtml](http://rchiips.org/nfhs/NFHS-5_State_Report.shtml). In all 36 states/union territories, the questionnaires were canvassed using Computer Assisted Personal Interviewing, except that the Biomarker Questionnaire was paper based and the results were entered into mini-computers in the field. Since the fieldwork for NFHS-5 was conducted in two phases that spanned parts of three calendar years (2019, 2020 and 2021), the reference period for questions/sections that were reference-period specific was different for Phase 1 and Phase 2 states/union territories<sup>1</sup>. The table below gives a list of affected sections and questions with the reference year for the two phases of fieldwork.

Questionnaire	Section and question number	Reference year	
		Phase 1 states	Phase 2 states
<b>Household</b>	QH21-QH23	2019-20	2020-21
	QH87-QH95	Jan. 2016 or later	Jan 2017 or later
<b>Woman’s</b>	Q224, Q225, Q246, Q247	Jan 2014 or later	Jan 2015 or later
	Q248, Q249	Before Jan 2014	Before Jan 2015
	Section 3: Q345, Q346	Jan 2014 or later	Jan 2015 or later
	Section 4: Q401-Q499J	Jan 2014 or later	Jan 2015 or later
	Section 4: Q499L-Q499P	Jan 2017 or later	Jan 2018 or later
	Section5: Q501-Q548	Jan 2016 or later	Jan 2017 or later
	Q550, Q551	Jan 2017 or later	Jan 2018 or later
	Section 5A: Q555-Q568	Jan 2013 or later	Jan 2014 or later
<b>Biomarker</b>	Section 10: Q1018-Q1032	Jan 2017 or later	Jan 2018 or later
	Calendar	2014-2019	2015-2021
	QB204-QB212	Jan 2014 or later	Jan 2015 or later

NFHS-5 questionnaires were translated into 17 languages. Questionnaires in the CAPI mini-computer in each state were multilingual, with questions in the principal language of the state/union territory and English, as well as 1-2 other commonly used languages in the state/union territory, where applicable.

<sup>1</sup> NFHS-5 fieldwork for India was conducted in two phases— Phase-I from 17 June 2019 to 30 January 2020 covering 17 states and 5 UTs (Andaman & Nicobar Islands, Andhra Pradesh, Assam, Bihar, Dadra & Nagar Haveli and Daman & Diu, Goa, Gujarat, Himachal Pradesh, Jammu & Kashmir, Karnataka, Kerala, Ladakh, Lakshadweep, Maharashtra, Manipur, Meghalaya, Mizoram, Nagaland, Sikkim, Telangana, Tripura, West Bengal) and Phase-II from 2 January 2020 to 30 April 2021 covering 11 states and 3 UTs (Arunachal Pradesh, Chandigarh, Chhattisgarh, Haryana, Jharkhand, Madhya Pradesh, NCT of Delhi, Odisha, Puducherry, Punjab, Rajasthan, Tamil Nadu, Uttar Pradesh, Uttarakhand) — by 17 Field Agencies.

INTRODUCTION AND INFORMED CONSENT

नमस्ते। मेरा नाम \_\_\_\_\_ है। मैं (NAME OF ORGANIZATION) के साथ काम कर रहा/ रही हूँ। हम पूरे भारत में स्वास्थ्य पर एक सर्वेक्षण कर रहे हैं। जो जानकारी हम परिवार कल्याण और स्वास्थ्य के बारे में घरों और व्यक्तियों से इकट्ठी करेंगे वो सरकार को स्वास्थ्य सेवाएं बनाने में मदद करेगी। आपका परिवार इस सर्वेक्षण के लिए चुना गया है। मैं आपसे आपके परिवार के बारे में कुछ सवाल पूछना चाहूँगा/ चाहूँगी। इन सवालों में लगभग 25-35 मिनट लगेंगे। आपके सारे जवाब गुप्त रखे जायेंगे और हमारे सर्वेक्षण के सदस्यों के अलावा किसी को भी नहीं बताये जायेंगे। आपका इस सर्वेक्षण में भाग लेना स्वैच्छिक है। अगर आप मेरे किसी सवाल का जवाब नहीं देना चाहते, तो मुझे बता दीजिये और मैं अगले सवाल पर चला/चली जाऊँगा/ जाऊँगी या आप किसी भी समय यह बातचीत रोक सकते हैं।

क्या आप मुझसे कुछ सवाल पूछना चाहती / चाहते है?

ANSWER ANY QUESTIONS AND ADDRESS RESPONDENT'S CONCERNS.

यदि आपको इस सर्वेक्षण के बारे में और जानकारी चाहिए तो आप इस कार्ड पर दिए गए नाम वाले व्यक्ति को संपर्क करें।

GIVE CARD WITH CONTACT INFORMATION.

क्या आप इस सर्वेक्षण में भाग लेने के लिए सहमत हैं?

Namaste. My name is \_\_\_\_\_. I am working with (NAME OF ORGANIZATION). We are conducting a survey about health all over India. The information on family welfare and health that we collect from households and individuals will help the government to plan health services. Your household was selected for the survey. I would like to ask you some questions about your household. The questions usually take about 25-35 minutes. All of the answers you give will be confidential and will not be shared with anyone other than members of our survey team. Your participation in the survey is voluntary. If I ask you any question you don't want to answer, just let me know and I will go on to the next question or you can stop the interview at any time.

If you have any questions about this survey you may ask me.

ANSWER ANY QUESTIONS AND ADDRESS RESPONDENT'S CONCERNS.

If you have any further questions about this survey you may contact the persons listed on this card.

GIVE CARD WITH CONTACT INFORMATION.

Do you agree to participate in this survey?

TICK HERE IF CONTINUATION QUESTIONNAIRE USED

7A बहु सुनिश्चित करने के लिये की कृपया अपने पूरे परिवार का कुटीरालय का विवरण दें।  
Just to make sure that I have a complete household listing.

a) क्या वहाँ कोई अन्य व्यक्ति है जिस को हमने इस सूची में शामिल नहीं किया है जैसे कि छोटे बच्चे का बच्चा।  
Are there any other persons such as small children or infants that we have not listed? YES → ENTER EACH IN TABLE NO

b) क्या वहाँ कि कोई अन्य लोग सामान्यतः रहते हैं जो आपने परिवार में सम्मिल नहीं है जैसे कि नौकर या दोस्त।  
Are there any other people who stay not be members of your family such as domestic servants, lodgers or friends who usually live here? YES → ENTER EACH IN TABLE NO

c) क्या किसी गलत रात वहाँ कोई मेहमान, अस्थायी आगन्तुक अथवा कोई अन्य व्यक्ति ठहरे थे जो इस सूची में शामिल नहीं है।  
Are there any guests or temporary visitors staying here, or anyone else who stayed here last night, who have not been listed? YES → ENTER EACH IN TABLE NO

**(A) CODES FOR Q. 3**

**RELATIONSHIP TO HEAD OF HOUSEHOLD:**

- 01 = HEAD
- 02 = WIFE OR HUSBAND
- 03 = SON OR DAUGHTER
- 04 = SON-IN-LAW OR DAUGHTER-IN-LAW
- 05 = GRANDCHILD
- 06 = PARENT
- 07 = PARENT-IN-LAW
- 08 = BROTHER OR SISTER
- 09 = BROTHER-IN-LAW OR SISTER-IN-LAW
- 10 = NIECE/NEPHEW
- 11 = OTHER RELATIVE
- 12 = ADOPTED/FOSTER/STEP-CHILD
- 13 = DOMESTIC SERVANT
- 14 = OTHER NOT RELATED
- 96 = DONT KNOW

**(B) CODES FOR Q. 7**

**AGE:**

- 06 = AGE LESS THAN ONE YEAR
- 96 = AGE 95 YEARS OR MORE

**(C) CODES FOR Q. 8**

**MARITAL STATUS:**

- 1 = CURRENTLY MARRIED
- 2 = MARRIED, BUT GAINA NOT PERFORMED
- 3 = WIDOWED
- 4 = DIVORCED
- 5 = SEPARATED
- 6 = DESERTED
- 7 = NEVER MARRIED
- 8 = DONT KNOW

**(D) CODES FOR Q. 12**

**BIRTH REGISTRATION:**

- 1 = C = CERTIFICATE
- 3 = R = REGISTRATION
- 3 = N = NEITHER
- 8 = DK = DONT KNOW

**(E) CODE FOR Q. 18**

**PRESCHOOL**

- 1 = ICDS RUN PSE
- 2 = OTHER GOVERNMENT RUN PSE
- 3 = PRIVATELY RUN PSE
- 4 = OTHER
- 8 = DONT KNOW

**(F) CODES FOR Q. 20 AND Q. 22**

**EDUCATION GRADE:**

- 00 = LESS THAN 1 YEAR COMPLETED
- (00 CAN BE USED ONLY FOR Q. 20, NOT FOR Q. 22)
- 65 = PRE-PRIMARY
- 96 = DONT KNOW

**(G) CODES FOR Q. 13**

**REASON FOR NOT ATTENDING SCHOOL:**

- 01 = SCHOOL TOO FAR AWAY
- 02 = TRANSPORT NOT AVAILABLE
- 03 = FURTHER EDUCATION NOT CONSIDERED NECESSARY
- 04 = REQUIRED FOR HOUSEHOLD WORK
- 05 = REQUIRED FOR WORK ON FARM/FAMILY BUSINESS
- 06 = REQUIRED FOR OUTSIDE WORK FOR PAYMENT IN CASH OR KIND
- 07 = COSTS TOO MUCH
- 08 = NO PROPER SCHOOL FACILITIES FOR GIRLS
- 09 = DUE TO DISASTER/ NATURAL CALAMITY

- 10 = NOT SAFE TO SEND GIRLS
- 11 = NO FEMALE TEACHER
- 12 = REQUIRED FOR CARE OF SIBLINGS
- 13 = NOT INTERESTED IN STUDIES
- 14 = REPEATED FAILURES
- 15 = GOT MARRIED
- 16 = DID NOT GET ADMISSION
- 96 = OTHER
- 96 = DONT KNOW

**SECTION 1. RESPONDENT'S BACKGROUND**

**INTRODUCTION AND INFORMED CONSENT**

नमस्ते! मेरा नाम \_\_\_\_\_ है। मैं (NAME OF ORGANIZATION) के साथ काम कर रही हूँ। हम पूरे भारत में स्वास्थ्य पर एक सर्वेक्षण कर रहे हैं। जो जानकारी हम परिवार कल्याण और स्वास्थ्य के बारे में चर्चे और व्यक्तियों से इकट्ठी करेंगे वो सरकार को स्वास्थ्य सेवाएं बनाने में मदद करेगी। आपका परिवार इस सर्वेक्षण के लिए चुना गया है। इन गवाहों में लगभग 40 - 60 मिनट लगेंगे। आपके सारे जवाब गुप्त रहे जायेंगे और हमारे सर्वेक्षण के सवालों के जवाब किसी को भी नहीं बताये जायेंगे। आपका इस सर्वेक्षण में भाग लेना स्वैच्छिक है। अगर आप मेरे किसी सवाल का जवाब नहीं देना चाहते, तो मुझे बता दीजिये और मैं अगले सवाल पर चली जाऊँगी या आप किसी भी समय यह बातचीत रोक सकते हैं। यदि आपको इस सर्वेक्षण के बारे में और जानकारी चाहिए तो आप मुझसे पूछिए या उस व्यक्ति को संपर्क करें, जिसका कार्ड आपके परिवार को दिया जा चुका है।

क्या आप मुझसे कुछ सवाल पूछना चाहती है?

ANSWER ANY QUESTIONS AND ADDRESS RESPONDENT'S CONCERNS.

क्या आप इस सर्वेक्षण में भाग लेने के लिए सहमत हैं?

Namaste. My name is \_\_\_\_\_. I am working with (NAME OF ORGANIZATION). We are conducting a survey about health all over India. The information on family welfare and health that we collect from households and individuals will help the government to plan health services. Your household was selected for the survey. The questions usually take about 40 - 60 minutes. All of the answers you give will be confidential and will not be shared with anyone other than members of our survey team. Your participation in the survey is voluntary. If I ask you any question you don't want to answer, just let me know and I will go on to the next question or you can stop the interview at any time. If you have any questions about this survey you may ask me or contact the persons listed on the card given to your household.

Do you have any questions?

ANSWER ANY QUESTIONS AND ADDRESS RESPONDENT'S CONCERNS.

Do you agree to participate in this survey?

317	अब मैं अपनी परिवार नियोजन के बारे में बात करना चाहूँगी - ऐसे बहुत से तरीके या साधन हैं जिन्हें हमारी गर्भधारण टालने या रोकने के लिए इस्तेमाल कर सकते हैं। क्या आपने कभी (METHOD) के बारे में सुना है?  Now I would like to talk about family planning - the various ways or methods that a couple can use to delay or avoid a pregnancy. Have you ever heard of (METHOD)?	
01	स्त्री स्तब्दी : और अधिक बच्चे के जन्म को रोकने के लिए, बिना ऑपरेशन कर सकती है। FEMALE STERILIZATION: A woman can have an operation to avoid having any more children.	YES ..... 1 NO ..... 2
02	पुरुष स्तब्दी : और अधिक बच्चे के जन्म को रोकने के लिए पुरुष ऑपरेशन कर सकते हैं। MALE STERILIZATION: A man can have an operation to avoid having any more children.	YES ..... 1 NO ..... 2
03	आइ यू डी या पी वी आइ यू डी : बिना डॉक्टर या नर्स से अपनी योनि में आइ यू डी या लूप रखा सकती हैं। IUD OR PPIUD: A woman can have a loop or coil placed inside her vagina by a doctor or a nurse.	YES ..... 1 NO ..... 2
04	सर्भिनोसक इंजेक्शन : बिना स्वास्थ्य प्रदाताकी (डॉक्टर, नर्स इत्यादि) से इंजेक्शन लगावा सकती हैं जो उन्हें एक या अधिक महीनों के लिए गर्भरही होने से रोक सकता है। INJECTABLES: A woman can have an injection by a health provider that stops her from becoming pregnant for one or more months.	YES ..... 1 NO ..... 2
05	सर्भिनोसक गोली : बिना गर्भरक्षण की टालने के लिए एक गोली प्रतिदिन या प्रत्येक सप्ताह ले सकती हैं। PILL: A woman can take a pill every day or every week to avoid becoming pregnant.	YES ..... 1 NO ..... 2
06	कंडोम या निरोध : पुरुष संभोग के पहले अपने लिंग पर रबर का आवरण लगा सकते हैं। CONDOM OR NIRODH: A man can put a rubber sheath on his penis before sexual intercourse.	YES ..... 1 NO ..... 2
07	स्त्री कंडोम : स्त्री संभोग के पहले अपनी योनि में रबर का आवरण रख सकती हैं। FEMALE CONDOM: A woman can place a sheath in her vagina before sexual intercourse.	YES ..... 1 NO ..... 2
08	अपासकालीन सर्भिनोसक : बिना गर्भरक्षण की टालने के लिए संभोग होने के बाद तीन दिन तक सर्भिनोसक गोली ले सकती हैं। EMERGENCY CONTRACEPTION: A woman can take pills up to three days after sexual intercourse to avoid becoming pregnant.	YES ..... 1 NO ..... 2
09	सर्भ-निरोध टोपी [डायाफ्राम] : बिना संभोग के पहले स्वयं ही उसे योनि के अंदर रख सकती हैं ? DIAPHRAGM: A woman can place a diaphragm inside herself before intercourse.	YES ..... 1 NO ..... 2
10	फोम या जेली [फोम या जलजला पदार्थ] : बिना संभोग के पहले स्वयं ही फोम या जेली को योनि के अंदर लगा सकती हैं ? FOAM OR JELLY: A woman can place foam or jelly inside herself before intercourse.	YES ..... 1 NO ..... 2

11	<p>मानक दिन विधि : किसी रंगीन बन्लों वाली डोरी का इस्तेमाल उन दिनों को जानने के लिए करती हैं जब वे गर्भवती हो सकती हैं; जिन दिनों वे गर्भवती हो सकती हैं, उन दिनों में वे कंडोम (मिरोच) का इस्तेमाल करती हैं या संभोग नहीं करती हैं।</p> <p>STANDARD DAYS METHOD: A woman uses a string of colored beads to know the days she can get pregnant. On the days she can get pregnant, she uses a condom or does not have sexual intercourse.</p>	<p>YES ..... 1 NO ..... 2</p>
12	<p>लक्ष्मणन अमेनोरिया विधि [LAM] : मासिक धर्म की अवधि प्रारंभ होने से पहले, प्रसव के छह महीने बाद, एक ही दिन और रात को लगातार स्तनपान करने की विधि का उपयोग करती है।</p> <p>LACTATIONAL AMENORRHOEA METHOD (LAM): Up to six months after childbirth, before the menstrual period has returned, a woman uses a method requiring frequent breastfeeding day and night.</p>	<p>YES ..... 1 NO ..... 2</p>
13	<p>सुरक्षित काल विधि : प्रत्येक महीने में जब ही लैंगिक रूप से सक्रिय रहती है तब महीने के दिन दिनों में उसके गर्भवती होने की आवाधिक संभावना रहती है उन दिनों में संभोग न करने से गर्भधारण को टाल सकती है।</p> <p>RHYTHM METHOD: Every month that a woman is sexually active she can avoid pregnancy by not having sexual intercourse on the days of the month she is most likely to get pregnant.</p>	<p>YES ..... 1 NO ..... 2</p>
14	<p>अधःपलन यानि विपदाकाल : पुरुष अयोधकर्म (बीर्य जाने) के पहले सावधानी पूर्वक विधि को बाहर निकाल लेता है।</p> <p>WITHDRAWAL: A man can be careful and pull out before climax.</p>	<p>YES ..... 1 NO ..... 2</p>
15	<p>क्या आपने किसी अन्य तरीके या साधनों के बारे में सुना है जिनका उपयोग किया जा सकता है गर्भधारण को टालने के लिए कर सकते हैं?</p> <p>Have you heard of any other ways or methods that women or men can use to avoid pregnancy?</p>	<p>a. **SECTION 1. RESPONDENT'S BACKGROUND**

**INTRODUCTION AND INFORMED CONSENT**

नमस्ते। मेरा नाम \_\_\_\_\_ है। मैं (NAME OF ORGANIZATION) के साथ काम कर रहा हूँ। हम पूरे भारत में स्वास्थ्य पर एक सर्वेक्षण कर रहे हैं। जो जानकारी हम परिवार कल्याण और स्वास्थ्य के बारे में घरों और व्यक्तियों से इकट्ठी करेंगे वो सरकार को स्वास्थ्य सेवाएं बनाने में मदद करेगी। आपका परिवार इस सर्वेक्षण के लिए चुना गया है। इन सवालों में लगभग 30-40 मिनट लगेंगे। आपके सारे जवाब गुप्त रखे जाएंगे और हमारे सर्वेक्षण के सदस्यों के अलावा किसी को भी नहीं बताये जायेंगे। आपका इस सर्वेक्षण में भाग लेना स्वैच्छिक है। अगर आप मेरे किसी सवाल का जवाब नहीं देना चाहते, तो मुझे बता दीजिये और मैं अपने सवाल पर चला जाऊंगा या आप किसी भी समय यह बातचीत रोक सकते हैं। यदि आपको इस सर्वेक्षण के बारे में और जानकारी चाहिए तो आप उस व्यक्ति को संपर्क करें, जिसका कार्ड आपके परिवार को दिया जा चुका है।

क्या आप मुझसे कुछ सवाल पूछना चाहते हैं?

ANSWER ANY QUESTIONS AND ADDRESS RESPONDENT'S CONCERNS.

क्या आप इस सर्वेक्षण में भाग लेने के लिए सहमत हैं?

Namaste. My name is \_\_\_\_\_. I am working with (NAME OF ORGANIZATION). We are conducting a survey about health all over India. The information on family welfare and health that we collect from households and individuals will help the government to plan health services. Your household was selected for the survey. The questions usually take about 30-40 minutes. All of the answers you give will be confidential and will not be shared with anyone other than members of our survey team. Your participation in the survey is voluntary. If I ask you any question you don't want to answer, just let me know and I will go on to the next question or you can stop the interview at any time. If you have any questions about this survey you may ask me or contact the person listed on the card given to your household.

Do you have any questions?

ANSWER ANY QUESTIONS AND ADDRESS RESPONDENT'S CONCERNS.

Do you agree to participate in this survey?

210	ASK CONSENT FOR ANAEMIA TEST FROM PARENT/OTHER ADULT IDENTIFIED IN 209 AS RESPONSIBLE FOR CHILD.	<p>As part of this survey, we are asking people all over the country to take an anaemia test. Anaemia is a serious health problem that usually results from poor nutrition, infection, or chronic disease. This test will assist the government to develop programmes to prevent and treat anaemia. We ask that children born in 2015 or later take part in anaemia testing in this survey and give a few drops of blood from a finger or heel. The equipment used to take the blood is clean and completely safe. It has never been used before and will be thrown away after each test. The blood will be tested for anaemia immediately, and the result will be told to you right away. The result will be kept strictly confidential and will not be shared with anyone other than members of our survey team.</p> <p>Do you have any questions? You can say yes to the test, or you can say no. It is up to you to decide. Will you allow (NAME OF CHILD) to participate in the anaemia test?</p>

310	ASK CONSENT FOR BLOOD PRESSURE FROM PARENT/OTHER ADULT IDENTIFIED IN 309 AS RESPONSIBLE FOR NEVER MARRIED WOMEN AGE 15-17.	<p>I would like to measure (NAME OF ADOLESCENT)'s blood pressure. This will be done three times, with an interval of about five minutes between measurements. This is a harmless procedure. Blood pressure measurement is used to find out if a person has high blood pressure. If not treated, high blood pressure may eventually cause serious damage to the heart. The results of this blood pressure measurement will be given to you and (NAME OF ADOLESCENT) after the measurement process is completed. The results of the blood pressure measurement will be explained to you. If (NAME OF ADOLESCENT)'s blood pressure is high, we will suggest that (NAME OF ADOLESCENT) consult a health facility or doctor since we cannot provide any further testing or treatment during the survey. You can also decide at any time not to participate in the blood pressure measurement. The result will be kept strictly confidential and will not be shared with anyone other than members of our survey team.</p> <p>Do you have any questions? You can say yes to the test for (NAME OF ADOLESCENT) or you can say no. It is up to you to decide. Will you allow me to measure (NAME OF ADOLESCENT)'s blood pressure?</p>

342	<p>ASK CONSENT FOR ANAEMIA TEST FROM PARENT/ OTHER ADULT IDENTIFIED IN 309 AS RESPONSIBLE FOR NEVER MARRIED WOMEN AGE 15-17.</p>	<p>As part of this survey, we are asking people all over the country to take an anaemia test. Anaemia is a serious health problem that usually results from poor nutrition, infection, or chronic disease. This test will assist the government to develop programmes to prevent and treat anaemia. For the anaemia testing, we will need a few drops of blood from a finger. The equipment used to take the blood is clean and completely safe. It has never been used before and will be thrown away after each test.</p> <p>The blood will be tested for anaemia immediately, and the result will be told to you and (NAME OF ADOLESCENT) right away. The result will be kept strictly confidential and will not be shared with anyone other than members of our survey team.</p> <p>Do you have any questions? You can say yes to the test for (NAME OF ADOLESCENT), or you can say no. It is up to you to decide. Will you allow (NAME OF ADOLESCENT) to take the anaemia test?</p>

361	ASK CONSENT FOR DBS COLLECTION FROM PARENT/ OTHER ADULT IDENTIFIED IN 309 AS RESPONSIBLE FOR NEVER MARRIED WOMEN AGE 15-17.	<p>As part of the survey, we also are asking people all over the country to take a test for malaria, HbA1c and vitamin D. Malaria is a common cause of fever and can be treated with medicines. Malaria can be present in patients with or sometimes without fever. It is important to find out the type of malaria and whether the currently available drugs will be effective for treating persons with malaria. The second test, HbA1c, a form of haemoglobin, is done to estimate the three-month average blood sugar levels to find out if the blood sugar levels are controlled in diabetic patients taking medicines. Vitamin D levels in the blood are measured to detect vitamin D deficiency, which is very common in India. Vitamin D deficiency causes brittleness of bones and can lead to fractures.</p> <p>The tests will be done at national level laboratories to obtain advanced information on these conditions and will be used by the Government to improve health programmes. For the tests, we need a few (more) drops of blood from a finger. The equipment used to take the blood is clean and completely safe. It has never been used before and will be thrown away after each test. No names will be attached and we will not be able to tell you the test results. No one else will be able to know (NAME OF ADOLESCENT)'s test results either. Information regarding care to be taken in case of fever and diabetes will be given along with a referral letter to the nearest health care facility for diagnosis and treatment. Information on ways to prevent vitamin D deficiency will also be provided.</p> <p>Do you have any questions?            You can say yes to the test, or you can say no. It is up to you to decide.            Will you allow (NAME OF ADOLESCENT) to take the tests?</p>

442	<p>ASK CONSENT FOR ANAEMIA TEST FROM PARENT/ OTHER ADULT IDENTIFIED IN 409 AS RESPONSIBLE FOR NEVER MARRIED MEN AGE 15-17.</p>	<p>As part of this survey, we are asking people all over the country to take an anaemia test. Anaemia is a serious health problem that usually results from poor nutrition, infection, or chronic disease. This test will assist the government to develop programmes to prevent and treat anaemia. For the anaemia testing, we will need a few drops of blood from a finger. The equipment used to take the blood is clean and completely safe. It has never been used before and will be thrown away after each test. The blood will be tested for anaemia immediately, and the result will be told to you and (NAME OF ADOLESCENT) right away. The result will be kept strictly confidential and will not be shared with anyone other than members of our survey team.</p> <p>Do you have any questions? You can say yes to the test for (NAME OF ADOLESCENT), or you can say no. It is up to you to decide. Will you allow (NAME OF ADOLESCENT) to take the anaemia test?</p>

460	ASK CONSENT FOR DBS COLLECTION FROM PARENT/ OTHER ADULT IDENTIFIED IN 409 AS RESPONSIBLE FOR NEVER MARRIED MEN AGE 15-17.	<p>As part of the survey, we also are asking people all over the country to take a test for malaria, HbA1c and vitamin D. Malaria is a common cause of fever and can be treated with medicines. Malaria can be present in patients with or sometimes without fever. It is important to find out the type of malaria and whether the currently available drugs will be effective for treating persons with malaria. The second test, HbA1c, a form of haemoglobin, is done to estimate the three-month average blood sugar levels to find out if the blood sugar levels are controlled in diabetic patients taking medicines. Vitamin D levels in the blood are measured to detect vitamin D deficiency, which is very common in India. Vitamin D deficiency causes brittleness of bones and can lead to fractures.</p> <p>The tests will be done at national level laboratories to obtain advanced information on these conditions and will be used by the Government to health programmes. For the tests, we need a few (more) drops of blood from a finger. The equipment used to take the blood is clean and completely safe. It has never been used before and will be thrown away after each test. No names will be attached and we will not be able to tell you the test results. No one else will be able to know (NAME OF ADOLESCENT)'s test results either. Information regarding care to be taken in case of fever and diabetes will be given along with a referral letter to the nearest health care facility for diagnosis and treatment. Information on ways to prevent vitamin D deficiency will also be provided.</p> <p>Do you have any questions? You can say yes to the test, or you can say no. It is up to you to decide. Will you allow (NAME OF ADOLESCENT) to take the tests?</p>
